

FUNCTIONAL SPECIFICATION DOCUMENT (FSD)

Medical Diagnosis Center by ServiceNow Service Portal

Platform: ServiceNow | Date: 06 October 2026

1. Introduction

This FSD documents the actual ServiceNow implementation and replaces unsupported full-stack assumptions with native ServiceNow components.

2. Project Overview

Purpose: streamline the diagnostic booking and reporting lifecycle through Medical Test Catalog → Select Diagnostic Test → Book Now → Patient Details → Schedule → Payment → Done → Appointment → My Appointments → Appointment Completed → Auto Create Report → Report → My Lab Reports.

Key Features

- Medical Test Catalog and diagnostic-test selection.
- Book Now and Patient Details capture.
- Schedule and configured Payment → Done stage.
- Appointment creation and lifecycle tracking.
- My Appointments patient-facing visibility.
- Appointment Completed event.
- Automatic Report creation.
- Report and My Lab Reports visibility.
- Roles and ACL-based access control.
- Flow Designer/configured automation and execution diagnostics.

3. Architecture

Patient / Requester → ServiceNow Service Portal / Medical Test Catalog → Booking stages → Appointment → My Appointments → Appointment Completed → Report → My Lab Reports. Flow Designer/configured automation supports lifecycle transitions, while roles and ACLs protect records.

4. Setup Instructions

Prerequisites: ServiceNow PDI/authorized instance, permissions for Service Catalog/Flow Designer/records/roles/ACLs, test users and access to execution details.

1. Create/configure the Medical Test Catalog and diagnostic test selection experience.
2. Configure the Book Now journey and required Patient Details fields.
3. Configure the Schedule stage and appointment date/time handling.
4. Configure the Payment → Done stage within the implemented prototype boundary.
5. Create/configure the Appointment record and required fields.
6. Configure My Appointments visibility and appointment lifecycle.
7. Configure Appointment Completed as the report-generation trigger.
8. Configure automatic Report creation and report data mapping.
9. Configure Report and My Lab Reports visibility.
10. Configure roles and Create/Read/Write/Delete ACLs for relevant records.
11. Configure notifications/status behaviour and validate the complete workflow.

5. Configuration / Component Structure

Configuration Area	Contents
Service Catalog	Medical Test Catalog, diagnostic test selection, Book Now and Patient Details configuration.
Schedule / Payment	Configured schedule selection and Payment → Done prototype stage.
Automation	Appointment lifecycle, Appointment Completed trigger and automatic Report creation.
Data Model	Appointment and Report records with configured patient/test/schedule context.
Patient Views	My Appointments and My Lab Reports.
Security	Roles and Create/Read/Write/Delete ACL records.
Operations / Diagnostics	Flow Designer Execution Details, platform logs and testing records.

6. Running the Application

Requester path: Medical Test Catalog → Select Diagnostic Test → Book Now → Patient Details → Schedule → Payment → Done → Appointment → My Appointments → Appointment Completed → Auto Create Report → Report → My Lab Reports. Administrator path: ServiceNow backend → catalog/configuration → automation → Appointment/Report records → security. Authorized operational path: Appointment → completion → Report validation.

7. API Documentation

No external REST API is part of the current implemented scope. Hospital/EMR/EHR/laboratory APIs, external messaging and analytics integrations remain future interfaces.

8. Authentication & Authorization

Authentication is provided by ServiceNow. Authorization uses configured roles and ACLs for patient, appointment, report and operational records.

9. User Interface

The primary UI is the ServiceNow Service Portal. The configured journey uses Medical Test Catalog, Book Now, Patient Details, Schedule, Payment, Done, Appointment, My Appointments, Appointment Completed, Report and My Lab Reports.

- Diagnostic Test
- Patient / Requester Name
- Email / Contact
- Phone / Mobile Number
- Schedule / Appointment Date-Time
- Payment / Booking Reference (when applicable)
- Address / Service Location
- Additional Patient / Test Details
- Appointment Number / Request Number

10. Testing

Test Area	Coverage	Status
Medical Test Catalog	Diagnostic-test discovery and selection	Pass

Test Area	Coverage	Status
Booking / Patient Details	Book Now and required patient-detail capture	Pass
Schedule / Payment	Schedule and configured Payment → Done path	Pass
Appointment	Appointment creation, mapping and lifecycle	Pass
My Appointments	Patient-facing appointment visibility	Pass
Appointment Completed	Completion event and lifecycle transition	Pass
Report Creation	Automatic Report creation after completion	Pass
My Lab Reports	Patient-facing report visibility	Pass
Security	Roles and Create/Write/Read/Delete ACLs	Pass
UAT	End-to-end booking-to-report journey	Pass

11. Screenshots or Demo

Final demonstration should show: Medical Test Catalog → Select Diagnostic Test → Book Now → Patient Details → Schedule → Payment → Done → Appointment → My Appointments → Appointment Completed → Auto Create Report → Report → My Lab Reports.

12. Known Issues

Issue / Limitation	Status	Resolution / Note
Appointment configuration and visibility	Resolved	Validated Appointment creation, lifecycle and My Appointments visibility.
Patient/test/schedule data mapping	Resolved	Verified data transfer into the configured Appointment record.
Appointment completion → Report automation	Resolved	Validated the configured completion trigger and automatic Report creation.
Report / My Lab Reports visibility	Resolved	Validated configured report relationship and patient-facing report access.
UI visibility behaviour	Resolved	Validated catalog/form behaviour.
Production load benchmark	Not measured	No exact production-scale performance benchmark was supplied.
External healthcare-system/API integration	Not implemented	Future scope.
Advanced analytics / BI	Not implemented	Future scope.
External messaging channels	Not implemented	Future scope.

13. Future Enhancements

Authorized hospital/EMR/EHR/laboratory integration; automated fulfilment tasks; multi-level approval/routing; SLA/escalation and dashboards; approved external messaging; governed AI-assisted classification/anomaly detection; advanced analytics; expanded diagnostic catalog.

Appendix - Functional Data Mapping

Data Element	Source	Destination	Purpose
Patient / Requested For	Patient Details / configured variable	Appointment → Patient / Requested For	Identifies the patient for the booked diagnostic service.
Contact / Mobile	Patient Details	Appointment → Contact	Stores approved requester contact information.
Diagnostic Test	Medical Test Catalog selection	Appointment → Diagnostic Test	Identifies the selected diagnostic test.
Schedule	Schedule stage	Appointment → Appointment Details	Stores the selected date/time information.
Payment Status	Payment stage	Booking / Appointment → Payment Status	Tracks the configured payment-stage outcome.
Appointment Status	Appointment lifecycle	Appointment → Status	Tracks booked, completed or other configured states.
Report	Appointment Completed event	Report record	Stores the report created after completion.
My Lab Reports	Report record	Patient-facing report list	Provides access to available reports.
